

## FIGURE 3

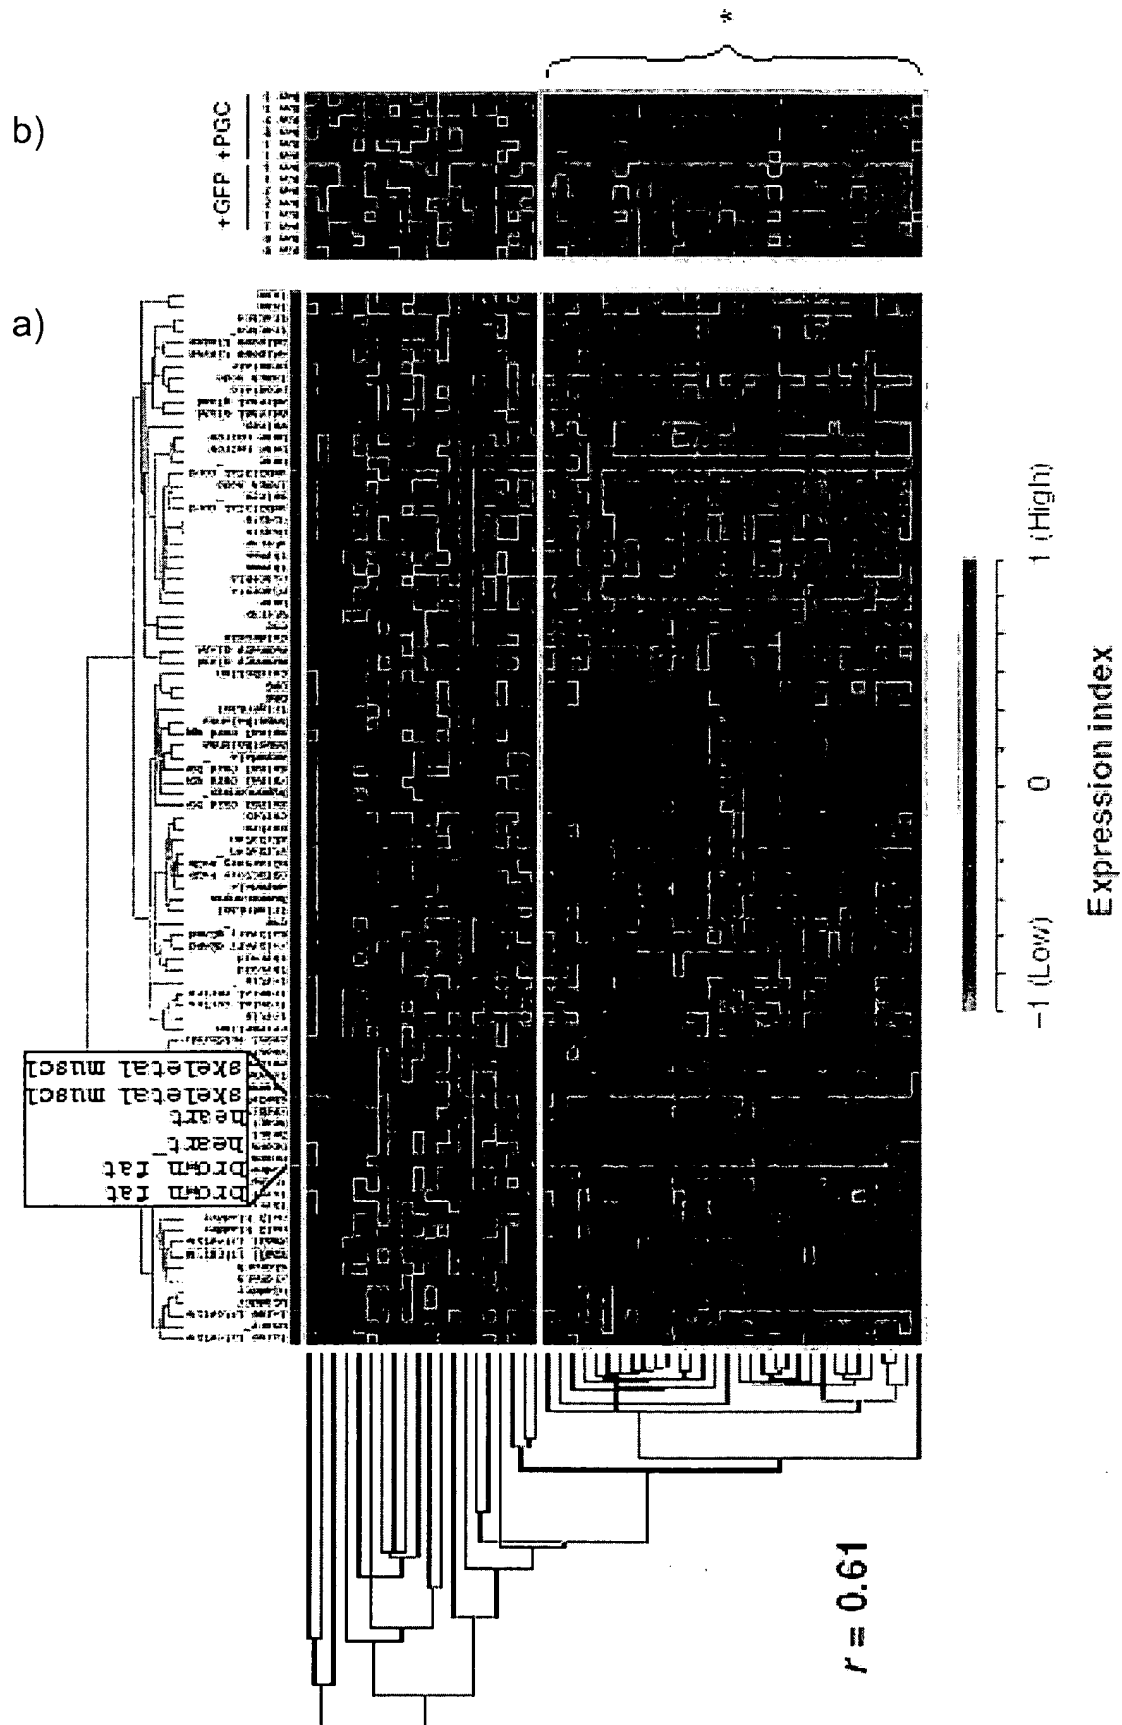

FIGURE 4

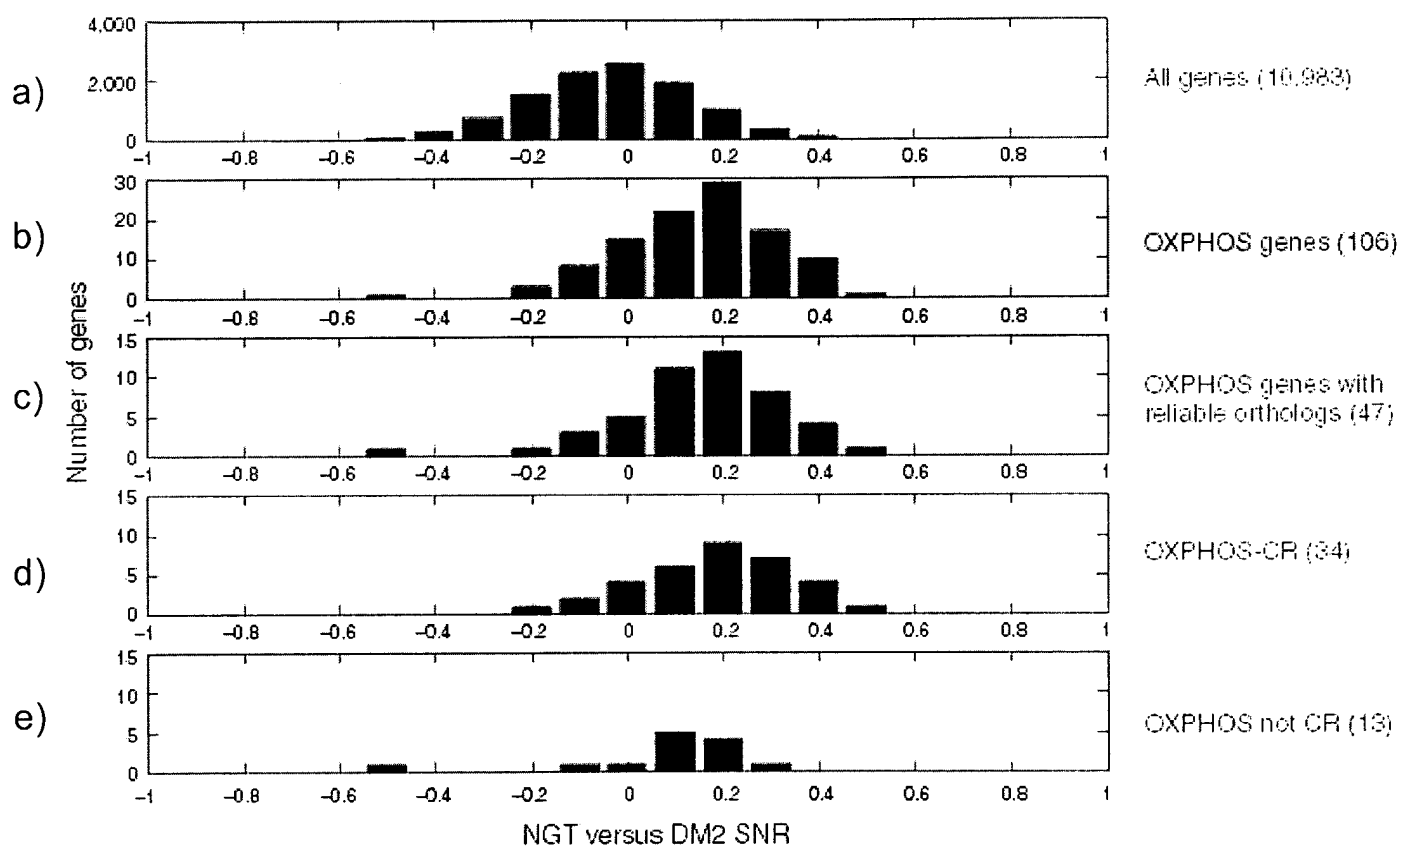

FIGURE 5

a)

Predictor(s)	$R^2_{\text{adj}}$	$P$ value
Diabetes status	0.28	0.0006
<sup>1</sup> OXPHOS-CR	0.22	0.0012
Diabetes status, OXPHOS-CR	0.33	0.0004
<sup>2</sup> <i>UQCRB</i>	0.31	<0.0001
Diabetes status, <i>UQCRB</i>	0.38	0.0001

<sup>1</sup> Addition of OXPHOS-CR improves the model with  $P = 0.05$ .  
<sup>2</sup> Addition of *UQCRB* improves the model with  $P = 0.03$ .
